FLOW LIGHT

Designed by James Russ

About

Flow is a refined play with form. A visual challenge where light is turned inside-out. Inspired by New Zealand's native Spinafex as it flows along our west coast beaches, propelled by the wind so that only the very tips of the plant brush any surface.

Flow is solidly made from the highest quality hand welded stainless steel and natural timbers. When light permeates the timber it provides the amazing warm glow.

Designed and made in New Zealand in 2015 by James Russ and built to last by the gifted artisans at Epsilon.

Dimensions

260 diameter

Options

- Oak, macrocarpa or carbon fibre.

Features

- Hand welded stainless steel
- Natural timbers or carbon fibre

Designed and made in New Zealand.
